Art Unit: 3632

This is the third office action for serial number 09/814,126, entitled Bracket For Mounting Auxiliary Machinery To Vehicle Body, in response to After Final Amendment filed on June 13, 2003.

Response to Amendment

Applicant's after Final amendment filed on June 13, 2003 has been entered. The finality of the last office action has been withdrawn based upon further consideration and a new ground(s) of rejection has been made in view of Curtindale.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curtindale 6,003,928. Curtindale discloses a first bracket (41) with shaft supporting portion (45) and engaging portion (55) near a peripheral wall portion of the

Art Unit: 3632

shaft supporting portion (near being not far in distant), a second bracket with engagement portion (99), and fixing means (121). Curtindale discloses that the engaging portion (55) is adapted so that the engagement portion (99) is slidably inserted into the engaging portion (55) when the second bracket is rotated the portions slidably engage one another. Curtindale discloses all of the limitations of the claimed invention except for the engagement portion adapted so that the engaging portion is slidably inserted into the engagement portion. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the engagement portion adapted so that the engaging portions is slidably inserted into the engagement portion, since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art without destroying the invention or producing any unexpected results. *In re Einstein*, 8 USPQ 167.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Curtindale 6,003,928 in view of Jacquemin et al. (Jacquemin) 5,975,617. Curtindale discloses all of the limitations of the claimed invention except for the cylindrical body is protruded from said first bracket obliquely upward. Jacquemin teaches that it is known to have a the cylindrical body (3) is protruded from said first bracket obliquely upward.

Art Unit: 3632

It would have been obvious to one having ordinary skill in the art to have modified Curtindale to have made the cylindrical body protruding from the first bracket obliquely upward as taught by Jacquemin for reducing the amount of force needed to insert the shaft into the shaft portion.

Allowable Subject Matter

Claims 11-14 are allowed.

Claims 2-5, 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose a guide holding plate forming the engagement portion, in a peripheral edge portion of the said opening portion, connectors arranged in said first bracket and said second bracket and connected to each other in a paired manner in a state of assembling the first and second brackets, wherein a wire connected to an electrical equipment of the machinery is connected to said connector arranged in first bracket, or a spacer piece formed in one of said first bracket and said second bracket and brought into contact the other of said first and second brackets so as to

Art Unit: 3632

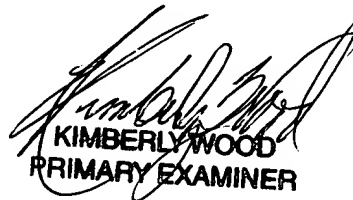

keep a predetermined distance with respect to said other of said first and second brackets.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
